

## About Turbo Pascal

Turbo Pascal is a complete software development system that includes a compiler and an Integrated Development Environment (IDE) for the Pascal programming language running under CP/M, MS-DOS and CP/M-86, developed by Borland under Philippe Kahns leadership.

The name Borland Pascal was generally reserved for the high end packages (with more libraries and standard library source code) while the original cheap and widely known version was sold as Turbo Pascal.

The name Borland Pascal is also used more generically for Borlands dialect of Pascal. Borland has released three versions of Turbo Pascal of historical interest free of charge: versions 1.0, 3.02 and 5.5 for MS-DOS.
